

In re Appln. of Tanaka et al.  
Application No. 10/727,398

*REMARKS*

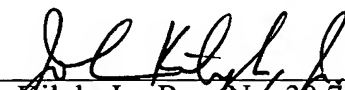

The specification has been amended to correct typographical errors to reflect the proper number of moles of two chemical compounds based on the recited weights of those compounds. The claim amendments are fully supported by the weight amounts of those same two chemical compounds set forth in the same paragraph being amended.

The claims have not changed as a result of the amendments recited herein. Accordingly, no additional search or examination is required as a result of the amendments, and the patentability of the subject matter defined by the claims is not affected.

These amendments were not presented earlier because the typographical errors in the specification being corrected were only recently appreciated by applicants, after receipt of the Notice of Allowance.

If there are any questions regarding these amendments, or if, in the opinion of the Examiner, a telephone conference would expedite the prosecution of the subject patent application, the Examiner is invited to call the undersigned attorney.

Respectfully submitted,
